Predictors of In-School and Post-School Success

Recently, the National Secondary Transition Technical Assistance Center (NSTTAC) conducted a systematic literature review to identify in-school predictors of post-school success in the areas of employment, education, and independent living for secondary students with disabilities (Test, Mazzotti, Mustian, Fowler, Kortering, & Kohler, 2009). As a result of this literature review, NSTTAC has identified 16 evidence-based predictors of post-school employment, education, and independent living success from the correlational research including career awareness, community experiences, exit exam requirements/high school diploma status, inclusion in general education, interagency collaboration, occupational courses, paid employment/work experience, parental involvement, program of study, self-advocacy/self-determination, self-care/independent living skills, social skills, student support, transition program, vocational education, and work study.

As NSTTAC has been disseminating these findings, we have had requests to gather a comprehensive list of predictors of in-school and post-school success for all secondary students. In an effort to respond to this request, NSTTAC has begun to develop a comprehensive list of predictors of in-school and post-school success across students with disabilities, students without disabilities, students at-risk, and students with mental health issues. To do this, NSTTAC reviewed reports and documents from various sources, including the National High School Center, Center for the School of the Future, National Dropout Prevention Center, Manpower Demonstration Research Corporation, Center for Research on the Education of Students Placed At Risk, and National Network on Youth Transition for Behavioral Health.

To be included reports and documents had to meet the following criteria: (a) included secondary education for students with and/or without disabilities, students at-risk, and/or students with mental health issues and (b) provided information or data on secondary in-school program variables as predictors of in-school and post-school success supported by research. Reports and documents were excluded from analysis if they did not supply empirical references and did not discuss secondary variables as predictors of in-school and post-school success.

From the reports/documents, NSTTAC has developed an initial draft of the following table, which provides information about in-school predictors of in-school and post-school success for students with disabilities, students without disabilities, students at-risk, and students with mental health issues. At this point, we are asking for your assistance. Please review the following tables and provide any feedback or additional information or references that you feel needs to be included. Please send your feedback to David W. Test at dwtest@uncc.edu.

### Career Development Activities (CDA)

- 19 days of lesson plans designed to help a student discover specific information about him or herself through awareness, self-knowledge, and education and occupational exploration. The broad goal of these 19 days is to help students begin to “figure out who they are while they decide what they want to become.” (Source: U.S. Department of Labor - Finding One’s Way: Career Guidance for Disadvantaged Youth.)
- Schools that expanded CDA and engaged students in CDAs were more likely to experience successful in-school transition outcomes (e.g. participation in work experience).

### Project Lead the Way (PLTW)

- PLTW prepares students to be the most innovative and productive leaders in Science, Technology, Engineering and Mathematics (STEM) and to make meaningful, pioneering contributions to our world. PLTW partners with middle schools and high schools to provide a rigorous, relevant STEM education. Through an engaging, hands-on curriculum, PLTW encourages the development of problem-solving skills, critical thinking, creative and innovative reasoning and a love of learning.
- Students who participated in PLTW, an 8...
Students who participated in PLTW, an 8 week high school engineering curriculum, were more likely to receive higher composite ACT scores.

- Students who participated in PLTW, an 8 week high school engineering curriculum, were more likely to attain high ACT math scores.
- Students who participated in PLTW, an 8 week high school engineering curriculum, were more likely to complete approximately the same amount of math and science credits in high school.
- Students who participated in PLTW, an 8 week high school engineering curriculum, were more likely to be involved in career exploration, including talking with adults about career goals and participating in school experiences that help them clearly define career goals.
- Students (i.e., seniors) who participated in PLTW, an 8 week high school engineering curriculum, were more likely to have higher attendance rates during the senior year than non-PLTW seniors.
- Students (i.e., seniors) who participated in PLTW, an 8 week high school engineering curriculum, were more likely to complete math courses during the senior year.
- Students who participated in PLTW, an 8 week high school engineering curriculum, were more likely to score higher on 10th grade state assessment in math and reading.

<td><strong>22. Talent Development High School (TDHS) Ninth Grade Instructional Interventions (program designed to accelerate the learning of at-risk students)</strong></td>
<td>The TDHS instructional program was a significant predictor of higher reading and math achievement for at-risk students who participated in the program for an entire school year. TDHS- Ninth grade instructional interventions (program designed to accelerate the learning of at-risk students); in low-performing public high schools in U.S. cities, high proportions of students drop out, students who stay in school typically do not succeed academically, and efforts to make substantial reforms often meet with little success. The Talent Development High School model is a comprehensive school reform initiative that has been developed to address these challenges (MDRC, 2005). Students enrolled in Talent Development High Schools earned on average 9.5 more course credits than those students enrolled in typical high schools. Students enrolled in Talent Development High Schools were more likely to be promoted to the 10th grade than students enrolled in typical high schools.</td>
</tr>
<tr>
<td><strong>23. Transition Service Integration Model</strong></td>
<td>The Transition Services Integration Model expands the availability of integrated career, community living, and postsecondary education options for individuals with significant disabilities who are in their last year of public school (i.e., age 20-21). The Transition Services Integration Model is designed to combine the resources of school and post-school</td>

24. **Youth Transition Program**

- The Youth Transition Program (Oregon) youth are served by a transition team consisting of a Vocational Rehabilitation Counselor, a Transition Specialist, and a Special Education Instructor from the local school district, who together with the participant develop a transition plan. During this program youth are given a variety of services which may include: career exploration, job shadows, unpaid and paid community work experiences, mentoring, classroom instruction in academic and vocational skills, independent living and personal/social skills and on-the-job training.
- The purpose of the program is to prepare youth with disabilities for employment or career related post secondary education or training.
- Students who participated in the Youth Transition Program (Oregon) for 12+ months were more likely to graduate from high school (Benz et al., 2000).

25. **Person-centered teacher variables** (i.e., empathy, warmth, genuineness, composites, nondirective, encourage learn, encourage think, adapt to differences,

- Students who had teachers that possessed person-centered teaching qualities were more likely to have positive outcomes in critical/creative thinking, math achievement, verbal achievement, grades, IQ, and perceived achievement.
- Students who had teachers that possessed person-centered teaching qualities were more likely to participate in class, have higher self-efficacy/mental health skills.

| 27. Achievement for Latinos with Academic Success (ALAS)¹⁴ | • The ALAS model involves four interrelated program components for (1) students, (2) schools, (3) families and (4) communities. The program focuses on middle school, the juncture at which students are most likely to drop out of school and emphasized a combination of psycho-social and academic interventions.  
• Students who participated in the ALAS program were more likely to stay in school  
• Students who participated in the ALAS program were more likely to be on track to graduate at the end of the ninth grade¹⁴ | X | (Larson & Rumberger, 1995)¹⁴ |
| 28. Check and Connect¹⁴ | • Check & Connect is a dropout prevention strategy that relies on close monitoring of school performance, as well as mentoring, case management, and other supports. The program has two main components: “Check” and “Connect.” The Check component is designed to continually assess student engagement through close monitoring of student performance and progress indicators. The Connect component involves program staff giving individualized attention to students, in partnership with school personnel, family members, and community service providers.  
• Students enrolled in Check and Connect Program were less likely to drop out of school¹⁴  
• Students enrolled in Check and Connect program were more likely to have earned | X | (Sinclair et al., 1998; Sinclair, Christenson, & Thurlow, 2005) |

NSTTAC DRAFT April 28, 2011
29. Talent Search

**Description:** The Talent Search program identifies and assists individuals from disadvantaged backgrounds who have the potential to succeed in higher education. The program provides academic, career, and financial counseling to its participants and encourages them to graduate from high school and continue on to and complete their postsecondary education.

- Students who participate in the talent Search projects are more likely to complete high school.

(Constantine et al., 2006)

30. Twelve Together

**Description:** Twelve Together is a peer support and mentoring program for middle and high school students. The one-year voluntary program offers weekly after-school discussion groups. Each group consists of about 12 students, who are a mix of students at high risk of academic failure and others at lower academic risk. Groups are led by two trained volunteer adult facilitators who moderate discussions.

- Students who participated in the Twelve Together peer support and mentoring program were less likely to drop out of school.

(Dynarski et al., 1998)

education, employment, and independent living

- Students with high performance in five areas, including reading, writing, math, behaving responsibly, and problem solving skills were more likely to be engaged in postsecondary education

- Students who passed more than half or all courses in 8 curriculum areas (remedial academics, traditional content classes, personal finance, community access, behaving responsibly, goal-setting or problem solving, specialized vocational education, regular vocational education) were more likely to be engaged in postsecondary education

- Students who had high scores on adaptive and academic skills, self-care skills, GPA on academic activities, received a diploma, and higher IQs as reported in school records were more likely to live independently

- Students who took more hours of academic and occupational courses and spent more time in regular education were more likely to be engaged in post-school employment

- Students who participated in more highly integrated and less highly specialized school programs were more likely to be living independently (i.e., high independence defined as: (a) parent’s prediction of youth’s future home independence, sum of cooking, shopping, washing, and cleaning skills, (b) sum of phone, time-keeping, counting, reading skills; (c) sum of dressing, feeding, and going out skills; (d) respondent’s claim of youth’s ability to respond on a follow-up questionnaire)

- Students who spent more hours in regular education courses were more likely to be

## Student Success in Postsecondary Education

Students who participated successfully in Occupational Skills Training (OST) program services which included characteristics: individualized design, work-site based curriculum, and a focus on the existing labor market and employment, were more likely to higher wages and worked more hours per quarter.

### Educational Employment Opportunities

### 6. Paid Work Experience

- Students who participated in the Youth Transition Program (Oregon) with 2 or more paid jobs during high school were more likely to be engaged in post-school employment or education.
- Students in the School to Work Transition Program (Oregon) who had 2 or more jobs during the last two years of high school were more likely to be engaged in post-school employment.
- Students who had worked for pay during high school for a full year were more likely to be living independently.
- Students with two or more jobs during their last two years of high school were more likely to be engaged in post-school employment.
- Students who had a job at the time of high school exit were 5.1 times more likely to be engaged in post-school employment.

### Vocational Education

- Students who participated in vocational education were 2 times more likely to be engaged in full-time employment.
- Students who passed more than half or all courses in 8 curriculum areas (remedial academics, traditional content classes, personal finance, community access, behaving responsibly, goal-setting or problem solving, specialized vocational education, regular vocational education) were more likely to be engaged in postsecondary education.

| 13. Social Skills | Students in the School to Work Transition Program (Oregon) who exited high school with high social skills at exit were more likely to be engaged in post-school employment | Education Education Employment Employment Independent Independent Living Living | 1990) | (Armstrong, Dedrick, & Greenbaum, 2003)7
| | Students who passed more than half or all courses in 8 curriculum areas (remedial academics, traditional content classes, personal finance, community access, behaving responsibly, goal-setting or problem solving, specialized vocational education, regular vocational education) were more likely to be engaged in postsecondary education | (Benz et al. 1997) 1 | (Halpern et al., 1995) 1
| | Students with high social skills (based on teacher ratings from the Life Centered Career Education rating scales) were more likely to have higher quality of life (independent living) and be engaged in post-school employment | (Roessler et al., 1990) 1 |
| 14. Parental Involvement | Students with one or more parents who participated (as measured by the percentage) in more IEP meetings during the 11th and 12th grade year were more likely to be engaged in post-school employment | Employment | (Fourqurean et al., 1991;) |
| | Students with positive perceptions of their parents' involvement in the IEP meeting (e.g., active participants, provided some input, attended meetings but did not actively participate) had higher postsecondary self- | Independent Independent Living | (Morningstar et al., 2010) 13 |
Students with positive perceptions of activities parents involved them in to prepare them for postsecondary education had higher postsecondary self-determination skills as measured by the Psychological Empowerment subscale of the ARC’s Self-Determination Scale (Wehmeyer & Kelchner, 1995), the How I feel About Myself Scale (Rehfeldt, 2006), and the Adult Trait Hope Scale (Snyder et al., 1991). Students with positive perceptions of career skills parents taught them had greater postsecondary self-determination skills. Students with positive perceptions of independent living skills parents taught them had greater postsecondary self-determination skills as measured by the Psychological Empowerment subscale of the ARC’s Self-Determination Scale (Wehmeyer & Kelchner, 1995), the How I feel About Myself Scale (Rehfeldt, 2006), and the Adult Trait Hope Scale (Snyder et al., 1991).

### 16. Interagency Collaboration

- Students who received assistance from 3 to 6 community-based agencies (as compared to students with assistance from 0 to 2 agencies) were more likely to be engaged in post-school employment or education.
- Transition interagency council characteristics (i.e., agency directories, agreements, councils, general information, local business advisory boards, parent network, statements) were significantly and positively correlated with postsecondary education.
